## Lifesaving Statistics - 1/1/2021 – 12/31/2021

HSforBC has a live release / save rate of 98%.

A 90% save rate for animals entering a shelter is a meaningful and common-sense benchmark for measuring lifesaving progress. Typically, the number of pets who are suffering from irreparable medical or behavioral issues that compromise their quality of life and prevent them from being rehomed is not more than 10% of all dogs and cats entering shelters. Shelters that meet the 90% save-rate benchmark are considered no-kill. Here's the save rate calculation we use:

$[(\text{Live Intakes}) - (\text{Died or Lost in Shelter/Care}) - (\text{Shelter Deaths}^*)]$  divided by  $(\text{Live Intakes})$

\* Shelter Deaths = animals euthanized in care
